## SUPER TELEPHOTO LENS CONFIGURATION

**Step 1:** Remove all dividers and accessories from the bag. Place the lens centered in the pack with the lens hood resting against the base. Fit the foam yoke under the lens neck to prevent side-to-side movement.

**Step 2:** Optionally, attach the foam collar to the bottom of the pack for extra stability, especially for smaller diameter lens hoods.

**Step 3:** Use the two large foam pillows to stabilize the lens hood or any areas where additional support is desired.

**Step 4:** Position the small, padded pillow under the camera body for extra cushioning.

### WHAT'S INCLUDED

- Realtree® ATX camouflage rain cover
- Fully adjustable, padded divider kit
- Two large foam pillows
- Small camera body pillow
- Padded lens yoke
- Padded lens collar
- Full-width compartment divider
- Body-wrap divider

## TRIPOD / MONOPOD - FRONT ATTACHMENT (Medium/Large Tripods)

**Step 1:** Locate the gray tab on the front of the pack. Open the hook-and-loop closure behind it and deploy both the tripod cup and lower attachment strap. Place two tripod feet into the tripod cup. Secure the legs using the lower tripod strap and buckle.

**Step 2:** Inside the top pocket, pull out the upper tripod attachment strap. Adjust the upper strap's length, wrapping it around the tripod neck twice before securing and tightening the buckle.

## TRIPOD / MONOPOD - SIDE ATTACHMENT (Small/Medium Tripods)

**Step 1:** Loosen the side pocket's cinch cord and the lower compression strap. Place two tripod feet in the side pocket, and guide the third leg under the lower compression strap.

**Step 2:** Unbuckle the upper compression strap, loosen it, position across the tripod, secure the buckle, and tighten.

## GRAY FULL-WIDTH DIVIDER

Use the large gray divider to create a space above the lens when:

- (a) no camera body is attached, or
- (b) a shorter lens is in place.

This creates an additional compartment at the top of the pack.

## BLACK CAMERA BODY DIVIDER

When transporting the camera body unattached to the lens, use the black divider to create a dedicated space for the camera. It can also accommodate smaller lenses and accessories.

## INCREASE CARRY CAPACITY WITH MODULAR COMPONENTS

Attach Think Tank Modular Components (sold separately) to the rails on the sides of the pack or the waist belt.
